Fruit and Vegetable Crops and Diseases

SUPERB CAMELLIAS

The exquisite, perfectly molded flowers of Camellia japonica, waxy and delicate in texture and beautifully tinted, never fail to draw constant admiration when they unfold during the winter months. And the plant itself is handsome, with its dense, dark evergreen foliage forming a perfect settling for the bright colored flowers. Camellias are not difficult to grow, requiring only a good well-drained soil and a partiolly shaded position, usually with an east or north exposure. In very heavy soils a little peat moss mixed in with the soil will provide good drainage and give better results.

Camellias, Group 1

Alba plena. A clear white, waxy flower, regular in form and very double. Long considered one of the very best white varieties.

Purity. As its name indicates, white as pure snow, large double flowers with high center and no stamens showing. Purity is indeed an apt name for this fine Camellia.

Lilyi. A medium-sized white variety. Bush rather spreading in habit. Flowers sometimes have a few petals spotted very pale pink, but nearly all flowers are pure white.

Imperator. Brilliant Christmas red, peonytype flowers, more graceful than most peonytypes. A large-flowered, large-leaved variety, vigorous in growth and free flowering.

Compte de Gomer. One of the popular old

vigorous in growth and free flowering.

Compte de Gomer. One of the popular old varieties. Double, variegated white and delicate pink, with irregular pencilings of oldrose. Blooms January and February. Flowers are medium size, with petals diminishing in size toward the center.

Auguste Delfosse. Medium-sized, light red, peony-type flowers. An extra-heavy bloomer, similar to Prof. Sargent, but a brighter, cheerier red.

cheerier red.

Pink Perfection. As its name implies, this
Camellia is really perfection in a regular shellpink flower. The bush is very free flowering,
compact in growth, and a real beauty in all

Mille Beau (Thousand Beauties). Apple-blossom-pink is the predominating color in this fine double-flowered variety. Each bloom on the same bush is different from all the others. They range from almost solid white and blush-pink to a deep pink, with all types of variegation between.

Cheerful, Cheerful in name and color. A bright cherry-red, very double, high-pointed center. This variety blooms while very young and usually has a few flowers open by Christmas.

Carnation. A bright red, carnation-shaped bloom with many small petals in the center which is rounded. Starts blooming early in the season and continues for a long period.

No. 97 Pink. A beautiful salmon-pink flower, very double, and about 4 inches in diameter. Plant rather dwarf and bushy, flowering very heavily, one of the early varieties.

Panache. A very different variegated type. No two blossoms on the plant are quite the same. Flowers rather large, quite double and ranging from almost clear white to shell-pink and clear deep pink. The average flower is lighter toward the outer petals and shades to deeper color toward the center. A fine vigorous grower that should be in every Camellia collection.

PINK PERFECTION

NOBILISSIMA

Camellias, Group 2

Rosita. One of the strongest growers. A very double, rose-pink flower with petals arranged in symmetrical rosette form. This is a very popular variety on the Pacific Coast, and is now being more largely planted in the Southeast. You'll like it.

Hallifolia. A clear light red semi-double flower, with golden-anthered stamens showing in center. Hallifolia is an early and very profuse bloomer with large, showy flowers, and blooms over a long period. A fine lawn specimen, and especially resistant to cold injury of buds.

Sarah Frost. A vigorous grower with full double flowers having petals diminishing in size to the center. Blooms outdoors in January and February. Flowers 3 to 3½ inches across and a clear rose-pink in color.

Group 2

Duc de Bretagne. Single, brick-red, mediumsize flowers borne profusely. This is the fastest-growing variety we know of, and while the individual flowers are not so fine, as a land-scape plant seen from a little distance it stands out as a fine splash of color in the winter landscape.

Henri Favre. One of the smaller-flowered variegated types. Background color is red, penciled with white stripes lengthwise of the petals. A vigorous grower of compact form. Free flowering habit.

Noblissima. Double peony form in a solid white flower. The golden-anthered stamens are seen between the petals. Blooms in midwinter starting in December and continuing through February.

Flowering Shrubs

HORTICULTURAL PEAT MOSS

We offer this season pure shredded air dried Peat, packed in veneer boxes containing 100 pounds net weight.

This fine Peat is unequalled as a mulch for Azaleas and Camellias. It is slightly acid in reaction, and will absorb over five times its weight in water, and retain it for a long time.

Peat also is an excellent top dressing for lawns, and 1 box of 100 pounds will cover about 100 square feet of surface 1 inch deep.

PECAN TREES

Frotscher. Very large nuts that average 45 to 50 per pound. Shell very thin—can be cracked with teeth. Meat is sweet and of fine quality, and can be moved entirely from the shell.

Moneymaker. This is an early bearer, prolific, healthy, and remarkably free from nut diseases that attack some of the Pecans. Size medium, rounded, oblong. A heavy bearer of splendid nuts.

Moore. A very consistent bearer, producing medium-sized nuts that are of the finest quality. Comparatively thin shell and plump kernel.

Schley. One of the finest Pecans. Very thin shell and meat that is of excellent flavor. Has few equals as a market nut.

Stuart. This Pecan thrives throughout the South and is a heavy bearer. It is extensively known. The nut has a shell of medium thickness and is of very good cracking quality.

Success. A good-growing, heavy-bearing

How to Plant Bare-Rooted Plants and Trees

Plants and Trees

Trees lose part of their root system in transplanting, and it is best to cut part of the top back to bainer. D. The hole for planting should be dug deep enough. The hole for planting should be dug deep enough and the top to accommodate the roots without cramping to accommodate the roots without cramping to an opposition and not packed downward. Any broken roots should be pruned off, and the ends of any roots that are bruised should also be pruned back slightly. You can see where the soil-line on the tree is, and the trees should be set from ½ to 1 inch lower than this soil-line. Use good top-soil, finely pulverized, in filling in. Put in some soil, then work it around the roots, keeping the side roots out sideways and not packing them downward. Pack the soil firmly around the roots when you put it in. When the hole is filled to within 2 to 3 inches of the top, fill it with water and let it soak down. Do this two or three times until you are sure the soil is thoroughly saturated to the bottom of the hole. Then, fill up the hole nearly to the ground-level with loose soil, and do not pack this.

Azaleas

Azalea indica

Indian Azaleas, Group 1

Duc de Rohan. Medium-sized; salmon-pink.

George Franc. A compact grower with very large pink flowers, shading to red in the center. This variety blooms early, and has as much or more spread than height.

Glory of Sunninghill. Another compact-growing variety with medium-sized, rather deep salmon flowers. Foliage is good and plant is vigorous.

deep salmon flowers. Foliage is good and plant is vigorous.

Iveryana. Almost pure white, but most flowers have a fine penciling of rose-pink which is visible at close range, but from 10 feet or more the blooms seem all white. Rather low and spreading in growth. Blooms in February and March.

Ledifolia Alba. The hardiest of the white Indian Azaleas. Leaves hairy. Flower petals separated at the ends, giving the flowers the appearance of a star. Hardy to Washington.

Mme. Frye. Light clear pink flowers and small shiny leaves make this an attractive plant at any season. Rather late to bloom, and the plants are compact. When in flower a mass of color is all you can see.

Orange Star. A tall-growing variety with deep orange-red flowers. A good background plant, as it attains a height of 5 to 6 feet.

as it attains a height of 5 to 6 feet.

Pink Macrantha. One of the most compact growers there is. Has a clear pink flower and blooms very late in the season, with a few flowers coming on the plants to June. An extremely hardy variety, never injured by cold.

Præstantissima. Deep pink blooms and very free flowering. Medium height. Midseason bloom. A strikingly beautiful plant.

Pride of Dorking. Rose-red; large flower. Late

Prince of Wales. Clear light red flowers in a bushy hardy plant. Blooms late February and March. Very showy.

Red Macrantha. A very hardy deep orangered variety. Rather tall growth. Small glossy leaves.

Indian Azaleas, Group 2

Elegans. The fastest grower of any pink variety. A beautiful clear pink flower coming into bloom fairly early in the season. The bush makes a rank growth, spreads well and is the top variety among the pink types.

Formosa. The giant among Azaleas. Lavender flowers of very large size. Leaves the largest of any Azalea, deep green. Compact and heavy bush which will outgrow any other Evergreen Azalea. Formosa is hardy, standiup and grows well, even under adverse conditions. A beautiful all-year evergreen as well as a persistent flowering one.

Cremina. Large flower; light pink. Compact

Omurasaki. Flowers almost identical with Formosa, plant somewhat lower and wider spreading, with slightly narrower leaves usually arranged in rosette form.

usually arranged in rosette form.

President Clay. An early and free bloomer having bright brick-red flowers in profusion. This is the most vigorous-growing variety in the red sorts, and one of the hardiest. It is in the same class as Elegans and Formosa as to vigor of growth and is one of the most satisfactory varieties we know of.

Vittata Fortunes and tell very

Vittata Fortunei purpurea. A tall, very early-blooming variety. Flowers rather light lavender with white variegations. This variety starts blooming in November and continues for some three months. A fine background plant for lower-growing varieties.

PRICES OF GROUP 2 10 \$3 00 4 50 6 50 11 00 13 50 20 00 32 50 Each \$0 35 50 75 1 25 1 50 2 25 3 50 8 to 12 in. 12 to 15 in. 15 to 18 in. 18 to 24 in... 24 to 30 in. 30 to 36 in. 3 to 4 ft.

Kurume Azaleas, Smothered with Blooms in the Spring.

Kurume Azaleas

Hinodegiri. All you see is a brilliant mass of scarlet flowers when this hardy compact Azalea is in bloom. A shapely, dwarf plant ideal for a low hedge or facing down taller shapshare.

rideal for a low neage of facing countries shrubbery.

Pink Pearl. Large clusters of light salmon-pink hose-in-hose flowers. Very free blooming and a bushy plant.

Snow. Pure snow-white flowers on a plant with very glossy bright green leaves. The best dwarf white.
